

## Lab 3 - Branching

---

*Note: For the sake of these tutorials, we are assuming you are using a terminal capable of running Bash commands. For Windows users, the recommended terminal program for this is Git Bash, which you can download [here](#).*

Follow along with these tasks to get familiar with branching in Git.

1. Run the command

```
cd ~
```

2. Run the command

```
git clone https://github.com/jordan-grindrod/scripts.git
```

3. Run the command

```
cd ./scripts
```

4. See which branches are currently configured for that repository
5. Create a new branch called develop
6. From develop, checkout to a new branch called issue-1
7. Delete the issue-1 and develop branches
