

# Lab 3 - CI/CD in the Real World

## Task

Research a company that use either continuous delivery or continuous deployment (CI/CD):

- What do their CI/CD pipeline(s) look like?
- What benefit does working in this way bring the company?
- How does working like this affect the end user?

There are many examples of companies that do this, including Google, Netflix, Etsy, Facebook and LinkedIn - if you are stuck for a suggestion of who to research.

## Output

Be prepared to present your findings to the class.
